

Success Story – CHU UCL Namur Biobank

At the CHU UCL Namur Biobank, 2025 has been a year of visibility, collaboration, and scientific contribution. Our team is proud to highlight two major achievements that strengthen our mission to support high-quality biomedical research.

1. Publication on Communication in Biobanking

We published a new review article emphasizing the crucial role of communication within biobanking operations:

“The importance of communication in biobanking” (2025).

This publication underscores how transparent, efficient communication enhances trust, accelerates research, and improves the quality and traceability of biospecimens.

2. Active Participation in the CHU UCL Namur Research Day

During the annual Research Day, we showcased our activities through dedicated posters and a movie illustrating our workflows, expertise, and services—from sample collection and storage to support for clinical and translational research. This event allowed us to engage directly with clinicians, researchers, and partners, reinforcing our central role within the hospital’s research ecosystem.
